> individual data glass solutions

> industry independent

> short return-on-invest cycle

> significant business value

> realisation of higher speed
> hands free
> augmented reality

> fewer errors, fault prevention

> highest flexibility
> user & process adaptable
> manufacturer independent
> additional modules available

> software development based on
> ISO/IEC 29110:2011

MADE IN GERMANY

Our Solution

*i*Vision® allows hands free work and displays additional process information at any time.

*i*Vision® is our software solution to combine innovative data glasses with your existing IT-system – without any changes on your side.

We support your individual workflow and provide different modules for a range of additional functions like offline support, reporting, documentation, MOP and AR-Technology.

A wide range of available interfaces e.g. SAP, ProAlpha and others help to ensure your performance improvement for instance by combining your existing development solutions or 3rd party applications.

Highlights

> manual order picking

> sorting of orders and goods

> time and workflow optimization

> documentation

> support function

> works with your existing IT-system

Dr. Roland Scherb at CeBIT 2016 (Brother)

*i*Vision® is an innovative solution for workflow improvements.
*i*Vision® supports order picking, incoming and outgoing as well sorting of goods and much more.

References

Brother
During the CeBit 2016 we worked successfully together with Brother to introduce the new Airscouter.
With *i*Vision® we can implement and connect the Airscouter within a very short time period.

Jungheinrich
Together with Jungheinrich we implemented several Vuzix M100 for order picking in combination with a brand new fork lift truck.
Live presentation of this data glass software solution for CeMAT visitors realised by *i*Vision®.

KS Autoglas Landsberg
To support craft business areas we implmented a productive pilot for KS glass. The employee will be guided through the whole process and important results can be documented.
